Let's put color in your business.

SCREEN PRINTING

Our Production is equipped with the latest machineries to help you print from one color to half tone on fabric panels or readymade garments.

PAD PRINTING

Pad Printing is a printing process that can transfer a 2-D image onto a 3-D object. This is accomplished using an indirect offset with the help of a silicone pad.

LASER ENGRAVING & METAL MARKING

Laser engraving, which is different from laser marking, is the practice of using laser to engrave an object. Laser marking on the other hand just discolors the surface, without cutting onto the surface. The technique does not involve the use of inks, nor does it involve tool bits which contact the engraving surface and wear out.

DIGITAL PRINTING

We offer wide range of digital printing services to meet customers demand for business cards, pamphlets, brochures, flyers, certificates. We stock variety of paper material to meet finest digital printing results in different ranges of paper quality from 60 gsm upto 350 gsm in color combinations and textures.
